Professional Experience

Pulsar Security, Junior Software Developer

April 2018 – October 2018

- Participated in Scrum planning meetings for two software products, and gave input on their design and direction.
- Developed components of a .NET automated penetration testing application, including:
 - Created a new archive file format, and a library capable of robustly reading from and writing to it.
 - Wrote a licensing enforcement module.
 - Wrote PInvoke code in C which gathered information from the Win32 API
- Developed two Windows installers using the WiX framework
- Developed a web service implementing a secure RESTful API on top of node.js, mongodb, and redis.
