Professional Experience

Pulsar Security, Junior Software Developer

April 2018 – October 2018

- Developed a single sign-on web service with a secure RESTful API atop node.js, mongodb, and Redis.
- Developed a number of components of a .NET application:
 - Wrote a specification for a new archive file format, and a library capable of robustly reading from and writing to it.
 - Implemented a licensing enforcement module.
 - Wrote PInvoke code in C which gathered information from the Win32 API
- Participated in Scrum stand-ups for two software products, and gave input on their design and direction.
- Developed Windows installers using the WiX framework
